Summary

- Lead Full Stack Engineer with 9+ years of experience across frontend, backend, mobile, architecture, and engineering leadership. Primary strength in React.js, Next.js, TypeScript, Node.js, and NestJS, with Android/Kotlin retained as strong supporting depth from years of mobile engineering experience.
- Hands-on technical lead with experience in active coding, architecture ownership, code reviews, mentoring, stakeholder collaboration, sprint planning, and delivery execution across product, startup, and service environments. Currently focused on practical AI-assisted development workflows, reusable frontend/backend starter recipes, and engineering standards that help teams ship faster without sacrificing maintainability.

Professional Experience

Rikoooo Technologies	Remote
Lead Software Engineer	November 2023 – Present
• Lead delivery across client products in social, AI lifestyle, DeFi, and gaming domains while contributing hands-on across mobile, backend, architecture, implementation planning, and code reviews. • Led a 4-engineer Android team for OP3N, a mass-consumer social and entertainment platform combining chat, reels, events, and music; contributed Android features, NestJS backend modules, chat-handling improvements, and 25k+ contact-sync fixes. • Led a 6-engineer team for Gaimplan, an AI-powered lifestyle management app for calendar synchronization, event suggestions, and conflict resolution; architected NestJS APIs, improved event loading, and strengthened sync mechanisms using pub/sub and cron services. • Led an 8-engineer team for YieldClub, a DeFi P2P lending app built with React Native and NestJS; helped scale the product from 0 to 5k active users, refactored wallet onramp/offramp flows, and contributed across mobile/backend modules. • Implemented CI/CD for YieldClub Expo builds using GitHub Actions and supported nightly interest-calculation jobs using AWS SQS and Lambda. • Supported BoredButton, a mobile game experience rendering web-based games inside Android/iOS apps; fixed Android Vitals issues, reduced crashes, optimized WebView rendering/memory usage, integrated Firebase push notifications, and developed a lottery feature across Android and NestJS GraphQL backend. • Manage delivery across teams of up to 8 engineers, including client/stakeholder communication, sprint planning, delivery timelines, architecture decisions, backend API design, Android delivery, and hiring/interview participation.	

ARInspect	Ahmedabad, India
Android Developer ' Senior Software Engineer ' Lead Software Engineer	December 2019 – October 2023
• Promoted from Android Developer to Lead Software Engineer by expanding ownership from Android delivery into full-stack engineering, architecture, team leadership, and cross-platform product execution. • Led a 10-engineer mixed team across web, mobile, and backend for ARInspect, an offline-first inspection and compliance-management platform used by US government inspectors, enterprise clients, and internal teams. • Spearheaded development across Angular/TypeScript web workflows, Android Kotlin/Java apps, Node.js/Express backend APIs, admin dashboards, and cross-platform inspection workflows. • Delivered a large spin-off web/backend feature module originally estimated at ~9 months within ~6 months by clarifying requirements early, removing blockers ahead of the team, and enabling a junior-heavy team to sustain high sprint velocity with minimal defects. • Built a compliance-management admin tool from scratch, including backend APIs, web modules, form-rendering support, and inspection workflow tooling. • Improved offline synchronization using Android WorkManager, SQLite/Room, ViewModel, Koin, Firebase, and Android architecture components for inspectors working in remote areas with unreliable connectivity. • Built cross-platform canvas rendering for Android and web annotations, custom shape drawing, and scale-aware inspection markup. • Improved form rendering, route optimization, web performance, local storage, PWA behavior, IndexedDB usage, Maps JS API workflows, and inspector-facing reliability. • Implemented Handlebars-based PDF generation for Android and web inspection reports backed by PostgreSQL/Oracle data flows and local SQLite/Room persistence. • Owned sprint planning, delivery timelines, code reviews, technical mentoring, and hiring/interview participation while coordinating with the internal product team and CTO. • Contributed to product outcomes backed by a client testimonial reporting up to 300% efficiency improvement after adopting the solution.	

Universal Software	Ahmedabad, India
Android Developer	August 2018 – December 2019
• Built Android applications using Java and Kotlin across Test Prep, Volunteering, and Life Goal Management products. • Delivered Android features for mock tests, volunteering event discovery/signup, and smart goal-management workflows. • Implemented WorkManager-based background processing and offline support while collaborating with .NET backend teams.	

Spyveb Solutions	Ahmedabad, India
Android Developer	August 2017 – August 2018
- Owned end-to-end Android implementation for iReverseSpeech and SkillHome while backend support was handled separately. - Built audio recording, waveform display, playback, and full audio-reversal functionality using Superpowered SDK. - Delivered Android workflows for skilled-worker discovery across daily-service categories such as plumbing and carpentry.	
Zaptech Solutions	Ahmedabad, India
Android Developer	August 2016 – August 2017
- Started professional career on Kidstats, an Android parental tracking platform for children’s achievements. - Contributed to API integrations, small feature implementation, unit tests, and Espresso-based UI tests. - Built foundational experience in Android delivery, debugging, testing, and release practices.	

Projects & Public Engineering Work	
AI Starter Recipes – Frontend & Backend Developer-tooling project under active development, built as usable early-MVP npm packages for generating AI agent rules, development workflows, and project guidance for modern frontend/backend teams. - Published npm CLI packages: frontend-ai-starter-recipes and backend-ai-starter-recipes. - Frontend CLI runs via npx frontend-ai-starter-recipes --output ./my-app or global fare --output ./my-app. - Backend CLI runs via npx backend-ai-starter-recipes --output ./my-backend or global bare --output ./my-backend. - Generates a canonical .ai/ directory with AGENT.md, structured rules, reusable skills/workflows, context, tracking, and IDE-specific adapters. - Supports Cursor, Claude Code, VS Code Copilot, Antigravity, Windsurf, React, Vue, Svelte, Angular, Next.js, Nuxt, SvelteKit, Remix, Astro, NestJS, Express, Fastify, Hono, ORMs, databases, validation, auth, and testing choices.	ARInspect / Compliance Management Platform Offline-first inspection and compliance-management platform used by US government inspectors, enterprise clients, and internal teams to digitize onsite inspection workflows. - Led a 10-engineer mixed team across web, mobile, and backend delivery. - Built compliance-management tooling, backend APIs, web modules, cross-platform inspection workflows, canvas annotations, PDF generation, local storage, and sync improvements. - Delivered a large spin-off web/backend module estimated at ~9 months within ~6 months, with minimal defects and a client-reported efficiency improvement of up to 300%.
YieldClub / DeFi P2P Lending App Crypto-based peer-to-peer lending application supporting DeFi lending flows, wallet interactions, and mobile-first user journeys. - Led an 8-engineer team as project manager and IC across mobile and backend modules. - Helped scale the product from 0 to 5k active users while refactoring crypto wallet onramp/offramp flows. - Implemented Expo CI/CD with GitHub Actions and supported nightly interest-calculation jobs using AWS SQS and Lambda.	Gaimplan AI-powered lifestyle/calendar management application focused on calendar synchronization, event suggestions, and conflict resolution. - Led a 6-engineer team while contributing as backend IC and project manager. - Architected NestJS backend APIs using GCP-heavy infrastructure and improved calendar synchronization using pub/sub and cron-based services. - Improved calendar event loading, data reliability, architecture reviews, code reviews, delivery planning, and implementation flow.

Technical Skills			
Languages	Frontend	Backend	Cross-platform Mobile
TypeScript, JavaScript, Kotlin, Java	React.js, Next.js, Angular, HTML, CSS, Redux, NgRx, Material UI, Canvas APIs, PWA, Service Workers	Node.js, NestJS, Express.js, REST APIs, GraphQL	React Native
Android	Basic Exposure	Architecture	Databases & Storage
Kotlin, Java, Jetpack Compose, XML Views, WorkManager, ViewModel, Koin	Flutter	Clean Architecture, MVVM, MVI, MVC, modular design, offline-first systems, API design, event-driven jobs, OOP, design principles, design patterns	PostgreSQL, Oracle, MongoDB, SQLite, Room, IndexedDB
Cloud & DevOps	Testing	Engineering Practices	AI / Developer Productivity
AWS, AWS SQS, AWS Lambda, GCP, Firebase, Docker, Jenkins, GitHub Actions, CI/CD, Nginx	Unit testing, UI testing, Espresso, Jest/Vitest exposure	Git, GitHub workflows, branching strategies, pull requests, code reviews, CI/CD, technical documentation	AI-assisted development workflows, agent rules, AI-assisted architecture/design, prompt engineering, Cursor, Claude Code, ChatGPT, GitHub Copilot, developer tooling, CLI tooling, frontend/backend starter recipes

Education	
Alpha College of Engineering & Technology	Bachelor of Engineering
Computer Engineering	June 2012 – June 2016
Languages	
English	Hindi Gujarati
